Lucknow, Uttar Pradesh

OBJECTIVE

Backend-focused developer building scalable, real-time systems and event-driven architectures. Experienced in designing low-latency applications and deploying containerized microservices.

EDUCATION

VIT Bhopal University

Computer Science Engineering GPA: 8.42 / 10.00

Sep 2023 – May 2027

Bhopal, India

Saiyyid Hamid Sr. Sec. School, Aligarh Muslim University

Intermediate (XII) Grade: 92.0%

June 2022

Aligarh, India

EXPERIENCE

• Software Management Intern

June 2026 – July 2026

Hindustan Aeronautics Limited (HAL), Lucknow

- Working within the **IT department** of HAL Lucknow to maintain and optimize the **ERP system** managing inventory and supply chain operations for aircraft accessory production.
- Analyzing assembly line output data to identify bottlenecks, contributing to workflow improvements that increase **production efficiency** of aircraft accessories.
- Handling ERP modules for **inventory tracking and stock reconciliation**, ensuring real-time accuracy of material availability across the production floor.

SKILLS

- Languages:** JavaScript, TypeScript, Java, SQL, C++
- Backend & Frameworks:** Node.js, Express.js, Next.js, React Native, RESTful APIs, WebSockets, RabbitMQ(familiar)
- Databases:** PostgreSQL, MySQL, MongoDB, Redis (Upstash), Firebase
- DevOps, Architecture & Tools:** Docker, CI/CD (GitHub Actions), AWS (EC2, S3, ECS), Event-Driven Design, Message Queuing, Git, Postman

PROJECTS

• GuardianSense: Real-time Distributed Monitoring System

July 2025

Node.js, Next.js 15, TypeScript, PostgreSQL (Supabase), Redis (Upstash), Firebase, EAS

- Reduced location tracking latency from ~3s to **<200ms** by replacing polling with a real-time event-driven pipeline using PostgreSQL.
- Built a **real-time geofencing system** that classifies GPS coordinates into 3 safety tiers and triggers **Telegram Bot API** alerts within 500ms of breach.
- Built a **secure device pairing system** using Redis-based rate limiting and token exchange, preventing brute-force attacks and enabling persistent authentication.

• Attentia.ai: Real-time Biometric Orchestration Engine

April 2026

Python, Flask-Sock (WebSockets), OpenCV, MediaPipe, Next.js 15, PostgreSQL, Docker

- Built an **event-driven Python backend** using **Flask-Sock** to process concurrent camera and microphone inputs, using WebSockets.
- Reduced system latency from **800ms+** to **real-time** by replacing REST polling with a full-duplex WebSocket communication layer.
- Designed a **fault-tolerant architecture** achieving **99%+ uptime**, ensuring system continuity during partial hardware failures.
- Containerized a **multi-service architecture** using Docker Compose, enabling reproducible deployments and eliminating environment-related failures.

HACKATHONS & RECOGNITIONS

• Finalist — MERNxAI Hackathon (ModelMart.ai)

April 2025

MERN Stack Club, VIT Bhopal

- Placed **2nd out of 40+ teams** in a 48-hour hackathon; built an AI model marketplace with a **Node.js/Express backend**, **Postgres** for model metadata, and React frontend — judged on technical depth and product viability.

LEADERSHIP EXPERIENCE

- **General Secretary**

The Startup Club, VIT Bhopal University

◦ Connected student founders with industry professionals via curated networking; initialized a platform for students to find collaborators and build on startup ideas together.

June 2025 – December 2025

- **Tech & Product Team Lead**

The Software Development Club, VIT Bhopal University

◦ Led development of the **club’s official website**, building an event registration system that handled **5,000+ student registrations** and internal club member management — with zero reported downtime.

July 2024 – June 2025

RESEARCH

- **UAV Technology for Multi-object Tracking and the YOLOV8 Algorithm: A Review**

Springer Nature Singapore (Proceedings of ICSDP 2024)

◦ Co-authored a **Springer-published research paper** on AI-powered UAV systems for real-time monitoring and object tracking.

◦ Analyzed the use of **YOLOv8 and multi-object tracking (MOT)** for detecting and tracking multiple moving objects in dynamic environments.

◦ Explored **autonomous navigation and task execution** in UAVs, along with challenges related to scalability, latency, and real-world deployment.

Jan 2026

- CERTIFICATIONS
- **The AI Engineer Course: AI Engineer Bootcamp — Udemy**

July 2025

• **The React Complete Guide 2025 — Udemy**

March 2025

• **The Complete Full Stack Web Development Bootcamp — Udemy**

January 2025
